INTRODUCTION	1
Critical Elements for Success in a Differentiated Classroom	2
About This Book	2
How to Use This Book	4
Chapter 1: IDENTIFYING YOUR LEARNING GOALS	6
Differentiation and Content Standards	6
Know Your KUDo's	6
Thinking Through the When and How of Differentiation	8
Chapter 2: EXAMINING YOUR PROFESSIONAL PRACTICES	11
Know Yourself as a Teacher	11
Know Your Students	19
Chapter 3: APPLYING PRACTICAL AND DOABLE ASSESSMENT STRATEGIES	25
The Role of Preassessment in Differentiation	27
Formative Assessment	37
Summative Assessment	44
Should I Differentiate Assessments?	48
Assessment Modifications for Special Needs Students	55
Differentiated Grading on Differentiated Assessments	56
Chapter 4: USING A DIFFERENTIATED LEARNING PLAN	57
The Nine Phases of Using the Differentiated Learning Plan	59
When and How to Differentiate Using a DLP	62
Chapter 5: MOTIVATING LEARNING THROUGH CHOICE OPPORTUNITIES	71
Offering Choices in Content, Process, and Products	72
Formats for Choice Opportunities	72
Using Choice Opportunities with Primary Students	83
Shopping for Ideas for Choice Opportunities	84
Chapter 6: PRESCRIBING TIERED ASSIGNMENTS AND USING FLEXIBLE GROUPING	85
Tiered Assignments	85
Grouping in a Variety of Ways for a Variety of Purposes	99
Chapter 7: MAINTAINING FLEXIBILITY IN PLANNING AND TEACHING	107
Flexibility in Lesson Routines	107
Flexibility in Delivering Differentiated Activities	115
Chapter 8: DEVELOPING STUDENT RESPONSIBILITY AND INDEPENDENCE	118
Your Management Profile	118
Routines to Make Everyday Events Go Smoothly	120

LIST OF REPRODUCIBLE PAGES

Chapter 9: USING ETHICAL GRADING PRACTICES

What Is Fair?	130
The Purposes and Problems of Grading	130
Grading in the Differentiated Classroom	131
Grading Is Personal	135

Chapter 10: DIFFERENTIATING FOR GIFTED AND TALENTED LEARNERS

How Is Differentiation Different for the Gifted?	136
Strategies for Differentiating for Gifted and Talented Learners	136
Differentiation for Gifted Learners Is Different	148

Chapter 11: USING DIFFERENTIATION STRATEGIES IN RESPONSE TO INTERVENTION

The Fundamental Beliefs of RTI	153
A Three-Tier Model	154
A Problem-Solving Process	155
Universal Design for Learning	155
The RTI-DI Link	156
How to Use This Book for RTI	156

Chapter 12: PROVIDING LEADERSHIP FOR DIFFERENTIATED CLASSROOMS

Teacher Leaders	158
Developing a School-Based Action Plan for Differentiation	159
Reflecting on Teaching Practices	164
Strategies for Keeping Differentiation at the Forefront	165

CONCLUSION

CHAPTER 5

Critical Element: MOTIVATING LEARNING THROUGH CHOICE OPPORTUNITIES

In many classrooms, the first step in differentiation is the use of student choice.

Indeed, choice opens up opportunities and provides students with varied experiences.¹ Curriculum expert Robert Marzano suggests that students' intrinsic motivation is linked to their interests. Students are simply more motivated to do the work if they are able to act on their interests through choice. But for choice to truly reflect differentiated instruction, teachers must be both analytical and playful in the design of choice experiences. Choice is not haphazard, random, or uncontrolled. In a differentiated classroom, choice is "controlled choice." You determine when student choice may occur, you design the activities students may choose from, and you control which choices students may make.

Choice provides students the opportunity and power to act on their interests; and the key to motivation is interest. Not only does choice motivate students to learn but also to actively engage in their learning. Choice "hooks" students into learning and doing the work. Whether your students are kindergartners or high school seniors, they want power. Choice is a way to enable students to gain a real measure of control over their learning.

Choice opportunities are also an easy and time-saving strategy for designing and facilitating

multiple tasks in your classroom. Multiple activities are planned ahead, therefore, saving you some day-to-day planning time. Another time-saver is to develop "generic" choice opportunities, for example, a choice board presenting spelling activities that can be used repeatedly with each new list of words.

Nothing should be offered as a choice unless *all* students have previously worked with the process or product.

Creating choice boards with broad themes such as historical events or genres of literature enable you to reuse choice boards, thus decreasing your planning time.

In designing choice opportunities, the most critical rule to follow is: Nothing should be offered as a choice unless *all* students have previously worked with the process or product. If a choice is offered to students to create a Web page, a tri-fold display board, or an artifact box to convey family history, and the students have not been introduced to these products previously, you have a management problem. Given their lack of experience with these products, you would need to teach each small group how to do the project of their choice. Why do that to yourself? Teach your whole class how to conduct a process or create a particular product *before* you use it as a choice option. This potentially

¹ Robert J. Marzano, *The Art and Science of Teaching* (Alexandria, VA: Association for Supervision and Curriculum Development, 2007).

means that at the beginning of a school year you offer fewer choices than at the end of the year, when you have introduced your students to many processes and products.

Offering Choices in Content, Process, and Products

Students may be offered choice in content, process, or products. Choice in content reflects opportunities for students to select *what* they might learn. While guided by learning goals or academic standards, you can offer students opportunities to act on their interests or go into greater depth on particular topics. At its simplest level, students might choose from a list of amphibians and engage in more in-depth research on the animal. At more sophisticated levels, you might assemble a collection of historical fiction books related to a social studies topic that represent a variety of reading-readiness levels (based on, for example, Lexile scores). Then, you organize the books into collections by readiness levels and ask students to choose any book of interest to them from specific collections of books based on their reading-readiness levels. In another example, students may be working on the same learning goal related to writing summaries, but the materials to summarize may be open to controlled student choice. You provide reading materials representing a variety of topics reflecting your students' interests. Choice in content enables students to act on their interests and motivates them to complete the assignment.

When you enable students to choose *how* they learn, you are using choice in process. This kind of choice can be implemented as easily as telling students that they may read their science textbook pages alone, with a buddy, by listening to an audio recording of the textbook reading, or in a small group with your guidance. Following the reading choices, all students complete a graphic organizer to record their facts. Another example of choice in process may involve students exploring their family's immigrant history. You could allow your students to

Choice boards are differentiated *only* if they are designed with learning differences in mind.

choose to either do print or online research or to interview family "historians" to gather information. In each of these examples, the students have choice in how they will learn about something.

Students may also engage in choice of products. This kind of choice enables students to choose how they will *demonstrate* what they have learned. It is important with this kind of choice that you represent a variety of learning preferences based on Multiple Intelligences. For example, students creating an invention to solve a household problem may construct a working or nonworking model (Bodily/kinesthetic learning preference) or create a labeled diagram (Visual/spatial learning preference). Allowing students to choose the way they demonstrate their learning enables them to capitalize on their strengths.

Formats for Choice Opportunities

There are a variety of formats teachers use to offer choices to their students. Choice boards, tic-tac-toe boards, RAFTS, two-by-two's, and show-and-tell boards are examples of formats teachers use to present choices to their students in motivating and manageable ways. Each is described in the following sections.

CHOICE BOARDS

Choice boards are collections of curricular problems, questions, assignments, projects, or activities from which students may choose. However, choice boards are differentiated *only* if they are designed with learning differences in mind. A random collection of tasks tossed on a choice board does not represent differentiated learning experiences for students. Creating a differentiated choice board requires reflection and planning. Page 73 provides a checklist to consider when designing differentiated choice boards.

CHECKLIST OF SIX ESSENTIAL FEATURES OF DIFFERENTIATED CHOICE BOARDS

1. ____ Presents activities clearly focused on learning goals or academic standards
2. ____ Presents activities involving a process or product that all students have previously experienced
3. ____ Presents activities reflecting multiple learning preferences
4. ____ Organizes tasks in ways that control choices to benefit students
5. ____ Offers engaging, interesting choices for all students
6. ____ Represents a variety of tasks purposefully differentiated by learning preference, readiness, and challenge and/or complexity (one board for all students)

or

- ____ Represents tasks specifically differentiated and prescribed to respond to the needs of a particular group of learners (several boards, each assigned to a group based on learning needs)

Making Differentiation a Habit

"The thinking teacher's manual for differentiation."

—Rick Wormeli, author of *Fair Isn't Always Equal*

"An important book that makes differentiation doable for all teachers in academically diverse classrooms."

—Carolyn Coil, Ed.D., educational consultant and author

"A wonderful synthesis of several well-respected and current resources . . . immediately usable in classrooms. Diane Heacox makes differentiated instruction almost fun for teachers!"

—Karen B. Rogers, Ph.D., professor of Education, University of St. Thomas, Minneapolis, MN

If you're a teacher with an academically diverse classroom—and what classrooms *aren't* these days?—you need this resource. Framed around the critical elements for success in today's classrooms, this book provides you with specific, user-friendly tools to help you seamlessly integrate differentiation practices into your daily routine.

Look inside to find:

- ▶ An easy-to-follow structure that helps you experience immediate success in your classroom
- ▶ Cutting-edge research connecting differentiation and Response to Intervention (RTI)
- ▶ Practical and insightful surveys, templates, and checklists
- ▶ 100 illustrative figures and diagrams representing all curricular areas and levels
- ▶ Valuable information on assessment and grading, tiered assignments and grouping methods, student choice and independence, differentiation for gifted learners, teacher leadership, and school-wide action plans
- ▶ A CD-ROM with dozens of useful reproducible forms and templates

As you implement the best practices in this book, you will be making differentiation a regular part of your teaching.

Diane Heacox, Ed.D., is an associate professor of Education at St. Catherine University in St. Paul, Minnesota. She also actively serves as a consultant and professional development trainer for both public and private schools on a variety of topics related to teaching and learning.

"The habit of differentiation results in students enthusiastically engaged in learning, experiencing increasing levels of success, and gaining confidence in themselves as learners," writes Heacox, **"and in teachers who welcome and celebrate the diversity of lives, talents, interests, and passions of their students."**
