

MAGIC STARS

An Ancient Legend: According to a legend, about 800 years ago a very wealthy group of Natives called Tocowans lived deep in the jungles of Mayatom. These Natives knew many secrets about the earth and the stars.

One day, a band of warriors from a far-away region attacked this talented tribe. The warriors hoped to discover some of the Tocowans' secrets: how to make the intricate jewelry and how to solve the various numerical mysteries.

Directions: Multiply to complete each star (see example). Notice that you only multiply two numbers together—the number in the circle multiplied by one of the other numbers in order to complete one triangle in the star.
