ABOUT THE AUTHOR

Kevin O'Reilly is History Department Chair at Hamilton-Wenham Regional High School, where he has taught for 29 years. He was National Council for the Social Studies/*Time* Magazine Secondary Teacher of the Year, Kidger Award Recipient, Richard Farrell National Teacher of the Year, NASDAQ/National Council on Economic Education National Grand Prize Winner, and American Historical Association Beveridge Teaching Prize Winner. He has authored six other books, over 30 articles in professional journals, a history videotape, and two internet-based simulations. He has conducted more than 100 professional workshops on critical thinking and decision making in history.

ACKNOWLEDGEMENTS

My appreciation to the following for their help on this volume: Dave Boschetto for suggestions on Lesson 8, Sean O'Reilly and Daniel Sargent for research and editing.

This book is dedicated to my lovable Sean.

TABLE OF CONTENTS

Student Handout 11	154

HOW TO USE THIS BOOK

Think of this book, and the other books in this series, not as a text, but as a menu. As a teacher, you select lessons from the menu. It was never intended that you would have everything on the menu—that would be overeating. [Take a look at the table of contents.] When choosing a lesson, look first at the problems on the student handout(s), and then at the student handout describing these problems' historical outcomes. If you like what you see, take a look at the lesson plan for ideas on using the handouts. You can teach all of the lessons by giving students a problem handout, having them discuss what they would do, and finally distributing the outcomes handout. You may also consult the “Quick Motivator” section of a lesson plan to use the handouts as a short introduction to class.

On the other hand, you can think of this book as a “how-to” guide for teaching specific decision-making skills while also covering significant events in United States history. The book posits a general guideline of ten distinct skills, organized under the acronym **P-A-G-E** to help students remember these skills. Take a look at the explanation of **P-A-G-E** in the introduction to this book, under the section titled “Guide to Thoughtful Decision Making.” This section explains each of the ten skills and includes examples.

Every lesson in this series analyzes the historical topic in terms of **P-A-G-E**. Each lesson targets specific skills, letting the content and the actual decision in history determine the skills emphasized in the lesson. Take a look at the skills grid for each lesson on page 1 of this book. Handouts are frequently used to focus students on using specific skills. For example, many lessons include a list of questions designed to provoke more questions from students, as well as to give them ideas of the types of questions to ask. Other lessons give students a list of assumptions and ask which they assumed in making their decisions. The other skills have similar handouts.

Whether you try the problem-discussion-outcome approach or concentrate more on specific decision-making skills, I hope these books will help make you a more effective teacher and help your students learn United States history in a way that will help prepare them to make more thoughtful decisions as citizens.

Kevin O'Reilly

INTRODUCTION

RATIONALE: Hindsight versus Foresight

When we study history, it is all too easy to sit in judgment of those who came before us. We read it after the fact; we see it in hindsight. Given the benefit of such 20/20 hindsight, some historical figures seem to have been very misguided or downright silly in their decisions. Why didn't they anticipate the consequences of their choices? How could they have been so shortsighted? Sports enthusiasts call this sort of analysis "Monday morning quarterbacking."

However, it's not so easy to laugh at the follies of past decision makers if we are confronted with decisions in history before we learn the actual results. In such a situation, we find ourselves making some of the same mistakes that historical characters made, and we sometimes commit new errors they did not make. This method of studying history, which we might call "foresight history", is far more challenging—and engaging—than the traditional retroactive method to which we are inured.

In short, when we learn history by hindsight we risk becoming more arrogant and complacent. If, on the other hand, we learn history by *foresight*, by casting ourselves in the role of those historical figures and making decisions as they did—without knowing the outcome—we can learn humility and gain a great deal of empathy for them. Students in my classes constantly exclaim, "This is hard!" as opposed to, "This is boring!"

Foresight history also helps students improve key decision-making skills they will use again and again as citizens. Schools of law, medicine, business, and nursing, along with the military and many other institutions, use case-study methods, where students are forced to make decisions about a particular case and then analyze their thinking. If each of these varied disciplines values decision making so much, shouldn't we be training all our future citizens how to make good decisions?

History provides many benefits for those who study it. Historical knowledge can be liberating all by itself, letting us draw back the veil of ignorance and see the present with eyes enlightened by the past. The more knowledge of history we possess, the better we understand our societies and ourselves. Study and evaluation of primary sources, discussions of motives, debates about significance, analyzing causes and effects, and many other strategies are vital to history courses. The lessons here on decision making are meant to support and enhance these other methods of studying history, not to replace them with a more "practical" type of history.

OVERVIEW

The lessons in *Decision Making in U. S. History* are to be used independently within a standard U.S. history course in middle school, high school, or college. Each book in this series comprises between eight and thirteen lessons. Each lesson includes the following:

1. Introduction: includes an overview of the topic, content vocabulary, and decision-making skills emphasized in the lesson.
2. Lesson plan: includes suggestions for how to use the handouts, how to focus on decision-making skills, how to connect the decision to the larger historical context, how to use video and other supplementary sources, and how to troubleshoot problems, should any arise.
3. Suggested answers: this section features teacher notes about outcomes (student versions of the outcomes are also provided—see number 6 below), references to historians' interpretations of the topic, decision-making analysis, and suggestions for further research.
4. Sources: includes the specific sources used in the lesson.
5. Problem(s): reproducible handouts used by students to read and analyze the problem.
6. Historical outcome of the problem: what people in history actually did and the consequences thereof.
7. Primary sources and visuals (if any): these are integrated into the lesson itself and are not included merely as window dressing.

Each individual decision-making challenge is referred to as a “problem.” Some lessons have one problem to challenge students, while others contain numerous problems. The handouts for each lesson are reproducible; teachers can also decide to use only selected parts of the handouts, if so desired.

While decision making is the main point of the books, historical content is also very important. These lessons focus on real historical problems that convey powerful lessons about U.S. history. The problems involve important issues relevant both to America's past and its present: taxation, foreign intervention, regulation of businesses and individuals, immigration, welfare, war, and so forth. In addition, not all of the problems come from the perspective of political leaders: many ask students to consider the perspectives of ordinary Americans such as workers, voters, farmers, African Americans, business owners, Native Americans, and women. Including problems from the perspectives of ordinary people prepares students for their roles as citizens in a democracy and encourages empathy for unfamiliar groups.

Most of the problems are brief—some as short as one paragraph—and can be used as class warm-ups lasting no more than ten minutes. Even with the shorter problems, however, the outcomes can often be quite complex, running on for several pages. The problems may appear deceptively simple, but analyzing them can be complicated. You can best judge how much analysis to include for each problem, and for how long to run each problem and discussion.

On the other hand, some problems are more complicated. These problems deal with crucial turning points in the nation's history. Students will almost certainly need more background information before making decisions, and analysis of these problems could take several class periods. These more involved problems could form the organization for an entire unit of study. For example, in my classes the problem on the New Deal provides me with the bulk of the time and activities on my unit concerning the New Deal. Students learn about the basic New Deal programs, including their advantages and disadvantages, while simultaneously working to improve their decision-making skills.

DECISION MAKING

What is Decision Making?

As explained in Student Handout 1, decision making involves making a choice when there is no clearly correct answer. Students can derive important lessons about decision making from encountering "messy" problems like these. Even where outcomes do not show a particular choice to be clearly right or wrong, students will still be surprised by some aspects of the outcomes and thereby gain insight into decision making.

Decision Making as Experience

As argued in Student Handout 1, the most powerful way to teach good decision making is through experience. People learn to make good decisions just by making decisions, period. Bad decisions are more instructive, perhaps, in making us more skeptical decision makers, but that isn't stressed in Student Handout 1. Examples from the teaching profession illustrate this negative-reinforcement aspect of decision making. Teachers who just put students into groups without giving specific directions quickly learn not to do it again. Lessons that don't work well are dropped or modified the next time around. Good teaching is basically good decision making, and good decision making is shaped rapidly by previous decisions.

Ordinary people, including students, have an optimistic tendency simply to assume their decisions will result in positive outcomes, rather than making an estimate of the probabilities of certain outcomes. Decision-making experts, on the other hand, have a much more realistic view of these probabilities, due in part to their greater experience with the types of problem with which they often deal. Experience teaches us to be more realistic about outcomes.

Just encountering the problems and outcomes in these books, therefore, can help students improve their decision-making skills in general.
